

What I Think Will Happen "Hypothesis"	What Actually Happened Result

This **Science Experiment template** helps you keep your information organised during the scientific process. Write down your guesses in the left column and your observations in the right column! Some scientists even complete their notes with drawings and schemes of the test subject!

Safety first! Do these experiments in the presence of an adult, they will know if an idea is too dangerous or if you should take it outdoors.

Do you want to show us your experiments? Ask a grown up to help you take a video and tag us on social media @lingokids or send it to us via email to [podcast@lingokids.com](mailto:podcast@lingokids.com)!
